About Me

Before entering college, I am always curious on how computer applications and things on the web works. Unfortunately, Information Technology courses are out of scope on my Student Assistant Scholarship, causing me to take Electronics Engineering. It all started on a simple "Hello World" that makes me more passionate, hooked and interested on web development as months go by. After four years, I can now finally carry on what makes me thrilled.

Below are my sample projects that showcase my skills and general background in web development.

Projects

PokeFinder
(*xdmac22.github.io/pokefinder/*)

Simple web application that search Pokemon by name or number and displays its data through asynchronous fetching at public API.

DC BakeShop
(*xdmac22.github.io/dcbakeshop/*)

A small bakery business website that can show all available products through fetching data on local JSON files, make list of order by DOM Manipulation and consist of Form with Validation using RegEx.

ABC Job Portal
(*xDmac22.epizy.com*)

A community web portal that can create user and allow them to post, view and reply to threads and job opportunities, search and send messages to other user, view their profile and update own profile. Admin user can also send bulk email using Java Mail API and manage regular users accounts.

Built using MySQL, Java and Bootstrap

Skills

HTML

CSS

JAVASCRIPT

BOOTSTRAP
